

/ FIRE EXTINGUISHING

Fires in or around Brokk demolition robots can have devastating consequences. Not only is there a risk for extensive downtime resulting in high cost for re-building and significant losses due to extended production time. There are also potentially workers involved with risk of being exposed to lethal hazards, with devastating results.

The fire extinguishing option is a proactive and efficient way to keep your demolition robot safe from fire. The system is mounted to minimise the time from detection of fire to complete extinguish.

A routing inside the hoods will sound the alarm and trigger the system automatically in case of fire. If so, the fire extinguishing agent will be spread to all areas that are connected to the system. The system can also be activated manually.

- **Quick and efficient extinguishing with routing under the hoods**
- **Automatic and manual activation**
- **Available for both smaller and bigger Brokk robots**
- **Proactive choice**

WHEN:

- If there is an increased risk of fire
- For insurance requirements

APPLICATION:

- Primarily in process industry and mining

FACT:

- 5 litre system suit sizes from Brokk 1200 to Brokk 5200
- 10 litre system suit Brokk 900
- Global service coverage
- Non-fluorinated option available
- Applicable standards FM5970, AS-5062
- Both automatic and manual activation
