

# FORCED DRAFT COOLING

## OPTIONS INFO

- Enables work in extreme environments
- For ambient temperatures exceeding 40°C

## GOOD TO KNOW

## Forced draft cooling for hydraulic system and electrical cabinet

Air nipples are mounted to the hydraulic system and the electrical cabinet which increases the machine cooling capacity significantly.

**When:**

- Working in hot environments exceeding 40°C

**Fact:**

- Option for all Brokk machines

**Note:**

- A dedicated compressed air filter is mounted in connection with the electrical cabinet to ensure clean and dry air to the cabinet
- Requires clean and dry air at 6-8 bar

**Application:**

- Construction, Tunneling, Mining, Metal Processing and Cement
