A PERFECT BROKK JOB IN THE NETHERLANDS!

The Dutch demolition contractor “Sloorobot.NL” specializes in non – standard projects for which they rely on Brokk products.

Recently they were called in on an urgent job near Rotterdam harbor to remove 350 tons of concrete from the belly of a large ship. The steel ship was to be dismantled on a scrap yard but it was too deep in the water to tow it on land.

A Brokk 100 and a Brokk 250 were used to break the concrete in combination with a Bob Cat for transportation. Especially the removal of the concrete from the small and confined spaces was a challenging task within tight time schedule.

The project was finished in time and the client was satisfied with the professionalism of the contractor “Sloorobot.NL” and the high production of both Brokk machines.

A perfect: Brokk job done!!
