Forced draft cooling for hydraulic system and electrical cabinet

Air nipples are mounted to the hydraulic system and the electrical cabinet which increases the machine cooling capacity significantly.

When:
- Working in hot environments exceeding 45°C

Fact:
- Option for all Brokk machines

Note:
- A dedicated compressed air filter is mounted in connection with the electrical cabinet to ensure clean and dry air to the cabinet
- Requires clean and dry air at 6-8 bar

Application:
- Construction, Tunneling, Mining, Metal Processing and Cement
